worl Ih . atill, however, deairable to inprees os eorne the wive of this chase in the certy trining of tifo pupits, aud to ley meat strese on its operations lor the future. Desiden brian the bexis of onamental as distinguished from fine arth and the beat guide to proportion and oymmetry, the wee of precticel geometry to all workmen and employest of workeepin whict two thenes the whole pablic are lerrely incladed -at the velucle of explacation and inemuroment, murt at once be ovident, and ite Falve in educational training be immodiately actznowledged.
The carefol evody of proctical peometry hould be eonerdered of the first importence 00 botb these aneount to all reectrer io elocmeaner ectoole, tho, frow being under the contool of the Committee of Privy Cosacil for Bdocation, adenitted for instruction iavo the Governomeat Schoale of Oromimental Art. 4. As the stodeat advances from "ffreoband drawing" to mepremans the relief of objecte by ligte and whedom, carefol metiods should be earnently inculcated, and the mode of "ehading" moployed be of suoh a vacure at Le led to an eppreciation of "beanty of esecution," a cendiag to thet general sease of perfection so noceasary to be awakened in all bhose wim is docorative benury. Excell ener in thim respect bas boen achicred in the sehooly at Glatgow, Mapcbenter, the wo Potwiry cetrools, and the Metropolitan seboalh, and rapinning to be oridouced in the school so litiely founded at Worcester alio. Great curre, benceror, is necesiony to avoud ersating escelbence of "erecation" of the erpense of exoel lence of draming, mich in alinghets obvarvabla, oven in a achool standing no hirh in thu mpect as Maschester. We the Paider echool the "shading." in many respects commeodshis, errs from the "crose-hatchang" adopted, the lisee of which are toe evidert and pronounced, and too much at, riakt aghen with ench other. A nother fuate of "Elinding" wheh meat be remarizad is the introdoction of wes much ball tint, often repricesating colous mither than light mad shade and eeoclewaly eccupying the time of the exudeate: althongt nrech improvement is obectrable ia the vorice from Sheffield, the fauls otill liagere thore, and produces that lendency to sootionem obeervable on the "shaded" works from that place.
5. Firure.-Is pasaigg to the atudy of the "Fipure," beth drawe mod modeltid, too griat theatiocemnoot be given to the initimivestucises. So the cian of draming "ooulines of the $\mathrm{S}_{\text {ger }}$ ury foom the flat," that in, from ouctine exterpien, a koomiadge obould be impartad of tha hinet that reguite the dintribetion of the featarres chermol the trouk, and thair perspocive chang is the rarions poritions of ahe bead and bedr. When the cudens edrancen to the "stody from the ruod," drawis! and propartion abould claina hin first atseation, and the araful cormpetion of the jointe and ertracmicio Te errongly insinted upon bofore ang exclonive conendaribon of "moden of ezecation." It is mornover, dowirable that male forma, and theos of the ceverer cheracter, such an the Lhecoboluen, Mracing Paga, or the Piepting Giedineor, chould firut be atadied, at imparting more iuformation te the ctudent than femetreforme er malo manee of a nore volaptonon character, asch at the Aatigone or the Apollime, which ape bater cmempind whea beeaty is to be stradied afier a cortain towes of toenledge of form med proportion has beed obmised. Le the matropolin,
 ztruction, 20 meal 5 at workum in the procien Butala, is atoen and wood erving, ce deo at Bermigh hates, 8befield, ond the Poweries, heomiodye of the hacren stave is wout firc. portart for the menefacturee of the lomelition, and, is theo mechoole, tbe colmepes ke drevien and modelling the figura abcald be reat eare fulty larght, together with anotomical atruoture, as far at is required by the artite; and ance is matal wort and chine the hoboure of the workmeo are oftec smeilja acale, areat and infolligent feish is abeolutely required. Soma morks of bigh meris in the Loodon aebool, being enlargocaenta into low roliefo frome the outiones of Flariaan, wowld bave bacefitad by grrater conpletion on regarda the
from the carrofl teecting from the antiqua, and of anotomical dection in that echool, and the excellent mechud employed, which, at made of inatruction, denerver bigh eummendation, -betbar as applied to draving or zootelliag. in boih which chmees very excellemt raulte are emhibiterl. Boith Birmingham, Masebeaver, and Neweasile beve shown acceauful asato mical utudies; and Sbeftield (altbough concinuing an olyectionable practice of addion antomical detade to the fractere, "cevullimed from the flat," inatead of applying them in the chas, "from the round,") this year manivente much mprorement in the cosching of thit clans.
6. In other ecbools' where the otudy of the Equire (if of leas importance for its bueal usa) ibould be careful and correch, as meten of edacation in loell areve errors are epperent: clumay and unfroiabed eytromities, an at Coventry, and over-charged developmant of the muscaier forme, at at York, whoold meet wish correction ol the part of the menters, if they would swoid ouct being imputed to them megrave falts of rescang, on fature inmpections of the mozke of the echoola. In this plece the modelling of fowne sad of orsement io the verione seboole amay properiy be refermed to: this in genernlly characierizad meme what wanting in completion net eo mach to to form a to a sence of true relief; thus Menchaster, much of the arnament in to atrenply and inarply relicved fromethe ground throngh ous sat so give the eppersence of petty work applicil to a surfact, mbilat in cortais, otherrise chilful, readeringe from marare, both in the Loadon and the Pemtaries achoole, the quantitien tre too equally md coarnaty boLeved. One or two works, bevever, in them schools are mariterion and free from thin defect Thilat a componition of bepues af greas merit from the Metropoltas school, and nowe trackeis wery skulfully devigned and asecaned Iron Stoke and Healey, doworve great commeadaciea: in the medulted copies of ermement foom Giagorm, sad in come of them frems Bheffigid, the mand of relied ic well upderstood and carefully rendered.
7. Colour Cleame-Twenart olese of worke to be comareoted upoa ane all thoee which have relation to oolour, and the varione meadoe of "enecration" is prixitian. Thris tre moot copputent part of the lebours of scthods of ornemental art, and ooe which hoo handity met rith aesthcient ateontion; pertly, it it trae, from the nature of the studime, which follow on a large atreant of proticienoy to be abrained a ander clameen, and partly from the weat of oufficient colomered axamplen in the actoote; but aboo, in some degree, from ant well op preciation of ive raloo and edranares. These in the Shefineld sctioal, the $=0$ of colour, end oves inufruction in procemes of pioting, are at prowent wholly madreted : even the move rapid execution ia the senderiag of "s forme," by tinina of eay kiod, seems set to be generally perctiad: thic in be rapretued, aod should suppenenind To paie from the powar of reike men ung at and shado is a move
 doubtiem, be monetimas inaprorel by the inkroduction of ectour. The expmition of anaselting eppliad to metale, to knipes, and reapone of wer, is the maseta of thile toparmank, empectally in the epecimese from India, are sufficient evidence of thin; asd Sbeffeld, which worka for ell markece, mould do wall to mote it. With $=$ manter mell quabiGiod so cant eat such otodien, is muat slosoot secemarily be inierrod, that this meariect of calour in the choice of the eomantsee. Y A if - - coomder how muck of the perception of what ia beaviful is mised up with the addition of colon to form, it will at once be perceived burn defecioot is any trainiag is ornamental art hich ryetematicully orerlook: it, Eren, Geld, the value of colour and of a kowledge of the processet of peidsing in the great seat of our chins manufacture, mux $a$ ono be ovideat. Yor, alchough there in an adreace in this rempect on hat jear in the Potwery wehoeth. thus atudy in not yet earriad on in shero to the
extent which the manuacture undoabtedly re-
gaired. Pron a proper mety of the law of colour, and of the upplication of coloured ormament to the araoe of porcelain, tome periectly novel trestment might be expected to anes; end much thas in thice in taste, prenien in execution, and merely imitative of otbes works, be baviabed from the manufacture whilnt the teaching good methode of erecution an achual socceanity.
8. At iar as iatrygtiga in the processes of miciong ero implied, the copire of ornament in tempora from the Chaggow mehool, and of by eludentin of the Meteopalitan ischouls. corve muobs praiee; end in thit reapect as en 40 in theircimiation of nampres, the fowers, is of the Mecropaliean Femele achool, those from Meschanter and Dublin, with one of tor exarupies from York, Slote, and Henley, an very masuefactory, but a more extended ar. quainuace with the lowe regulating the by mosiove combination and arramgement a colour is requisito is alt the echools. The andy of matural olyeete, of fatiage and fower. co nugenkion now idman and beautiful eos. bmantion is coonected wihe this clast, and the etachest in oftae allomod to linger too long one that part whach is mosely meparative to the uee of coloar. The elabarien and carcful our Live dravinger and cornpositione of foliage frox Gimprow, Sputalfodide Stolve, Haniey, and Manchoster, aod the beeutiful shacied stadia of folvand fraen the throe letter schoola, cuith wich dvastape givo may as mearlier pornd te their atady in colous Coventry, whad seam to possess talent of this kind tho. mall an the atudeater in the nemly formec chools at Worcaster and Meccleafield, thoud 0 eariy an poncible have extoriled clastes for theec asudias an of reapecinal valoe to their ion menufinctures: the objediso urged as to the diffoulty minina from the eocosity of stud pip by gao-haph is not an obmencie which mood vand in the way of a lerge amonat of bexe: being thue derived. Nutinghanon (which sead up ene or (wo peod abited acamples) and Bolfatione, from the nature of the loend manofactures, in same denree an ereeption to ine Dremaity for the wee of eublour ; thal for incretsing a love and study of nature, oven bere int practice sbould tea be meglectad.
9. Elamentery Daign-To coltivate ine wreptive facelay in the ecudents, a chats af elensodary design tha beem formed, so ererive them in the melection and ornacaruchi combi mation of em Eatariale Le the Metropolitar choul (onde) the reachian of the class rob tintm in the atodepu boing required to arragn eome imple fore in a given geometrical apser baviok eo eyo aspecable diatribution and guantity. Thay alemarde proceed to arrag in similar apacen folinge or Bowen frow galume, fbich they are taupht to coarentict clive co far as to reduce shom to et tal tras. mest and yrametrical dixtribution of partu © they progrem in the claee thoy add caloe - gradacieat and ben in oimple harnooviou combination, and ase manghat to dintribute the pettern vith viow to "repeats." Some ching shin this in the method of the Mancheaer elboal: chere, bowerer, the structure or groweb of o Lowar in explaned by tedent in mequirad to mearge, geometricalt of otberwive over a aimen spece; whint 2 Ghapow the due mone Zater 10 corniam in chothing known metetm fore with foliape derived feom natuag, but rith litule apparen! revation to the parpon of the oreameath -trether mat, is ralial, or in celour. Betara and Spitalfialds setroels suem avecosofuly for. Uuian the practing of the achood at Sanerve Heme, and Mabougt come emgertions mighis be derived from the coarse pround at Manchester, thim wesm ans the whote so be the moos mindectory mode of conducting the cias. - clase which showh an early at poustre be is op.
a. Dueign- It is proper to conclude wish core remarka oo the subjuct of desian n , whith theo this year recsived a larfer ebare of atantion in all the cobeele Wibont detiring 10
 invours of the rohook, it mua be reomembertid
